

Bhakti Patel

(424) 448-9797 | Worcester, MA, 01609 | bhakti.rock91@gmail.com | [LinkedIn](#) | [Github](#)

Senior Software Engineer

Full Stack Development | Agile Leadership and Tech Mentorship | AWS

Senior Software Engineer with 8+ years of experience in full-stack development and delivering scalable solutions. Demonstrated success in reducing delivery times by 25% and enhancing system performance by 40%. Proficient in React, JavaScript, TypeScript, SQL, Python, and C#, with expertise in designing and shipping high-performing data models and interfaces in cloud services like AWS, GCP, Azure. Skilled in building APIs, databases, and business logic. Experienced in leveraging AWS cloud services, Docker, and Kubernetes for cloud-based development and containerization. Strong focus on engineering excellence, implementing best practices in testing, documentation, and observability. Proven ability to mentor junior engineers, collaborate across teams, and drive continuous improvement in architecture and processes.

SKILLS

Languages and Frameworks: React, JavaScript (Vue, Angular), TypeScript, Python, .NET Core, ASP.NET, Java, C#, C, C++, MVC, Node.js (Express.js), EXPO, Microservices, RESTful API, OAuth

Data Management and BI tools: SQL, MongoDB, Elasticsearch, Kafka, PostgreSQL, Aurora MySQL, DynamoDB, Tableau

Continuous Integration & Deployment and Delivery: Git, Github Actions, Gitlab CI, Azure Pipelines, TFS

Cloud Services & DevOps: Docker, AWS (EC2, S3, CloudFront, Lambda), RDS, Microsoft Azure, GCP

Machine Learning: TensorFlow, NumPy, Scikit-learn, Matplotlib

Unit and Integration Testing: Junit, Selenium, Postman

PROFESSIONAL EXPERIENCE

Worcester Polytechnic Institute

Research Assistant

Worcester, MA.

March 2024 – Present

- Engineered scalable backend solutions for the “SmartWAnDs” Health Mobile App, enhancing wound care recommendations by integrating smartphone images with Electronic Health Records (EHR), resulting in improved clinical decision-making for wound nurses.
- Configured and optimized cloud infrastructure using AWS EC2 instances for the “SmartWAnDs” project, leading to a 40% increase in API response efficiency and ensuring robust scalability for high-traffic usage.
- Developed and deployed Python and Flask APIs, enhancing the functionality of key modules like PWAT score, wound segmentation, and decision classifiers, which led to a 30% improvement in system performance and reliability.
- Designed and implemented a full-stack solution for the “Cardiology” Health portal using the MERN (MongoDB, Express, React, and Node) stack, ensuring seamless functionality across all devices and achieving HIPAA compliance for secure patient data management.
- Architected and configured cloud infrastructure from scratch on AWS for the “Cardiology” Health portal, optimizing deployment processes and securing sensitive health data, which improved system scalability and compliance with industry standards.

Graduate assistant

January 2024 – March 2024

- Graded student assignments and provided feedback on their projects for the IMGD 3000 course focused on game engines in C++. Additionally, I assisted with small tasks and quizzes for the course and gained knowledge about gaming consoles in C++

Accenture Pvt Ltd

Application Development Team Lead

Mumbai, India.

March 2020 – August 2023

Client –Piraeus Bank, Microsoft

- Led a cross-functional team of 7 specialists, driving the design and implementation of scalable, reusable full-stack solutions for Microsoft and Piraeus Bank. Utilized technologies such as React, Redux, Node.js, Java, Angular, TypeScript, Python, Go, ASP.NET, Azure, AWS, and SQL to deliver mission-critical applications.
- Architected and developed high-performance, fault-tolerant systems using microservices architecture, ensuring seamless integration, reusability, and long-term scalability.
- Spearheaded cloud-native services using Azure and AWS, deploying high-performance backend services. Employed containerization (Docker, Kubernetes) to scale systems effectively while leveraging CI/CD pipelines with Azure Pipelines, resulting in a 30% reduction in time-to-market.
- Enhanced system performance by integrating AI-powered features and optimized database schemas. Reduced API times from 5 seconds to 45 milliseconds for Piraeus Bank’s Stock Exchange module through performance tuning and database optimization.
- Implemented data structures, algorithms, and design patterns to improve performance and scalability. Applied object-oriented design principles to ensure system reliability and ease of maintenance.
- Promoted code quality through regular code reviews and integration of unit testing frameworks (Junit, Postman).

- Mentored junior developers, encouraging best practices like test-driven development (TDD) and continuous delivery.
- Recognized for exceeding client expectations by enhancing system performance and ensuring a seamless user experience. Received commendations from the Microsoft team for performance improvements and leadership.
- Drove Agile and Scrum methodologies to improve team collaboration, increasing productivity by 30%. Managed end-to-end product development, including design, implementation, testing, and release management, while ensuring adherence to SDLC best practices and security standards.

Saint Gobain (Grendwell Norton)

Senior Software Engineer

Mumbai, India.

September 2017 – December 2020

Client – Saint Gobain

- Delivered a centralized Product Information Management (PIM) tool from concept to launch, collaborating with PMs, UX designers, and Engineering Managers. Utilized Agile methodologies to guide development and incorporate feedback, resulting in a robust solution that streamlined product data management and enhanced cross-channel consistency.
- Designed and developed scalable, high-performance web applications adhering to best practices and coding standards. Actively participated in architectural discussions to evolve software architecture, effectively addressing future business needs and improving overall system reliability.
- Engineered a web-based PIM tool leveraging SQL, MongoDB, Node.js, and MVC frameworks on the backend, and React + Redux, TypeScript, Angular, and Python on the frontend. Implemented microservices architecture and configured CI/CD pipelines using JetBrains and Docker on GCP, ensuring efficient build and deployment processes.
- Optimized application performance and security through rigorous code reviews, testing, and advanced troubleshooting. Enhanced system scalability and resolved technical issues efficiently, leading to improved application stability and reduced downtime.
- Implemented infrastructure solutions with Docker and CI/CD pipelines from scratch, significantly improving deployment efficiency and reducing time-to-market. Successfully managed infrastructure on GCP, resulting in a more reliable and secure application environment.

Cirrius Wireless Technology

Software Engineer

Mumbai, India.

April 2016 – September 2017

Client – Zydus, GSK, Glenmark

- Rearchitected a monolithic codebase into a horizontally scalable system using RESTful microservices built with the Physii tool. Enhanced application performance and scalability, supporting client needs for Zydus, GSK, and Glenmark.
- Designed and implemented Single Sign-On (SSO) and OAuth for API access, implemented RESTAPI's for Physii tool improving security and streamlining authentication processes across multiple brands. This resulted in enhanced user experience and compliance with security standards.
- Developed a comprehensive UI for Medical Representatives to track and analyze medical information for major pharmaceutical clients, leveraging Node.js, Vue.js, JavaScript, React, and TypeScript. Improved data accessibility and decision-making capabilities for clients.

Marico Pvt Ltd

Software Trainee

Mumbai, India.

November 2014 – April -2016

Client – Marico

- Contributed to the full software development lifecycle for an in-house FMCG project, developing various modules that streamlined internal processes and enhanced functionality for higher management.
- Developed proof-of-concept prototypes for a hybrid mobile application using Cordova, JavaScript, SQL, and REST APIs, successfully deploying the app across Android, iOS, and Windows Phone platforms, thus extending the application's reach and improving user accessibility.
- Managed tools and infrastructure for the Marico Enterprise Application (MEA), enabling higher-level executives to efficiently approve statuses and leaves via a streamlined portal, significantly improving operational efficiency and reducing administrative overhead.

EDUCATION

Worcester Polytechnic Institute

Master of Science in Computer Science

Worcester, MA

Expected Graduation Date - May 2025

University of Mumbai

Bachelor of Engineering in Computer Engineering

Mumbai, India

May 2011 - May 2014

Maharashtra State Board of Technical Education

Diploma in Information Technology

Mumbai, India

June 2007 - June 2010

CERTIFICATION

AZ-900 Microsoft Fundamentals

AWARDS & RECOGNITION:

- Valued Contributor Recognition, Accenture
- Excellence Award for Innovation, Saint Gobain
